

FundView

The planning layer Indiana school finance has been missing.

EARLY-ACCESS PARTNER COHORT · SUMMER 2026

Your 1-year and 5-year cashflow projection models, capital improvement plans, debt management scenarios, and monthly financial tracking metrics all exist in different files, folders, and computers across the business office.

FundView is the web-based command center built to bring all this together. It runs alongside Boyce or Skyward financial systems, and incorporates the projection, referendum, and board-reporting work no other product in this market does, and is shaped around how Indiana school finance actually works: SEA 1, DLGF, circuit breaker impact, Indiana school finance rhythms. And, it's all built on a powerful AI layer that is trained to access your data and primary sources pointing to Indiana code and education policy.

WHAT IT DOES

Projects the whole year

Five-year cashflow projections, fund balances, and referendum scenarios all in one place. Model a 2 percent raise or 200 fewer students and watch the next five years adjust.

Explains itself

Ask in plain language. Answers come from your district's own data and the Indiana rule they rest on, then become board-ready narratives. No rebuilding slides.

Refuses to guess

The AI-powered assistant is held to your numbers and verified Indiana statute and policy. When it lacks the basis to answer, it says so. Nothing gets invented in front of your team or board.

The early-access partner cohort

FundView is bringing on 5 to 10 Indiana districts as an early-access partner cohort. These districts will be first on the platform and help shape what it becomes. The group is small on purpose: a tool built for Indiana school finance has to be shaped by the people who run it.

01 Early access pricing

Held through June 2027, the full 2026–2027 school year, at or below what analytics-only tools charge while including AI none of them offer.

02 A direct line into the roadmap

Need a specific report or projection? Early-access partners ask, and it shapes what gets built next.

03 Direct access to Steve

No support queue. Email, phone, and working sessions with the person who built FundView and also sat in your chair.

04 Beyond FundView

Preferred access to Willow Run Group's wider AI work: district audits, staff training, and operational automation.

THE NEXT STEP

See how FundView could help your district.

Book a walkthrough with Steve. Not a generic demo. Steve walks your team through FundView using demo data based on real Indiana school scenarios, and answers the questions you actually care about.

Dr. Steve Troyer, Founder. Five years as an Indiana superintendent, roughly a \$32M operating budget and \$77M in capital projects. He launched WRG in Jan 2026 to build the tools and systems he wished he had. FundView is the first, built for the people who still sit in that seat.
